

ADITYA KUMAR SHAH

Bioinformatics Scientist | Genetic Engineering Specialist | Data Scientist

Bioinformatics and genetic engineering specialist integrating biotechnology and data science for genomic analysis, precision medicine, and scalable biotech solutions.

221B Baker Street,
Jalandhar, India

Education

Technical University of Munich
M.Sc Bioinformatics / Genetic Engineering
2029 - 2031

Lovely Professional University
Bachelor in Technology in Biotechnology
2025 - 2029

Skills

Technical

Python (Pandas, NumPy, Scikit-learn)
R (Bioinformatics & statistics)
SQL
Machine Learning & Data Analysis

Bioinformatics

Sequence alignment (BLAST) Genomic
data analysis
Data visualization

Biotechnology

PCR, Gel Electrophoresis Fermentation
Technology Molecular Biology
techniques

Certifications

Data Science & Machine Learning
Bioinformatics Specialization
Advanced Genomics Analysis

Language

English: Fluent (C2)
German: B2/C1 - Professional working
proficiency

Work Experience

2035 - present
Leading Biotech / Pharma Company - Germany
Senior Bioinformatics Scientist

- Led genomic data analysis for disease research
- Designed pipelines for large-scale DNA/RNA sequencing data
- Contributed to precision medicine and genetic diagnostics

2033 - 2035
Biotech/Healthcare Firm - Germany
Data Scientist - Healthcare & Genomics

- Built machine learning models for disease prediction
- Worked on multi-omics datasets
- Improved diagnostic accuracy using AI-driven insights

2031 - 2033
Industrial Biotech Company - Germany
Bioprocess / Production Engineer

- Optimized fermentation and bioproduction systems
- Increased yield efficiency using data-driven methods
- Managed industrial-scale biotech operations

Key Projects

Genomic Data Analysis Platform

Developed scalable pipeline for DNA sequence analysis. Automated mutation detection and visualization.

AI-Based Disease Prediction System

Built predictive models using patient datasets. Integrated biological and clinical data.

Bioprocess Optimization System

Designed simulation model for fermentation processes. Reduced production cost through optimization algorithms

Achievements

- 3-5 Research Publications
- International research collaborations
- Hackathons / innovation competitions
- Recognized contributions in biotech/data projects
